

Lip Enhancement

Lip enhancement and augmentation are one of the most popular treatments within facial aesthetics. Lips frame your smile and with age become thinner and less plump. Plumping and recontouring the lips make them appear more sensual, youthful and attractive.

We can create fuller upper lips for a more voluptuous smile, remove fine lines from around the mouth, enhance the shape and definition of the lips and create a more prominent cupid's bow.

Summary of treatment

- ◆ **Procedure time**
Less than 40 mins
- ◆ **Duration**
6-9 months
- ◆ **Down time**
Swelling 2-3 days
- ◆ **Anaesthetic required?**
Topical anaesthetic or local anaesthetic injections if required.

It is important to know that fillers, Botox/ Azzalure and even tooth whitening agents are prescribed medicines only in the UK. It is illegal to prescribe and administer any of these medications without the proper current prescribing qualifications. People who have this qualification are; surgeons, doctors, dentists, prescribing nurses and prescribing pharmacists

and have an active registration with their governing body only. This law was set to protect the public from "back street" individuals who do not possess the appropriate level of knowledge of anatomy and drug effects on the body and do not answer to a public self-governing body that continually police and research the effects of medications. Quotations can only be safely given after a consultation is made so why not book your no obligation, free consultation at our reception or on line at www.ilfracombedentalpractice.co.uk

Botox Dermal Fillers Lip Enhancement

Ilfracombe Dental Practice

"Enhance what frames your smile"

We use branded Botox from Allergan, and Azzalure from Dysport, the world's leading pharmaceutical companies in anti-wrinkle injections and the only Food and Drug Administration (FDA), approved treatment to temporarily improve frown lines, forehead lines and crow's feet around the eyes. Frown lines if lightly treated, can create a very natural look, and further applications the lines will become even less obvious as the lines do not get a chance to embed. If requested, we can still allow the eyebrows movement so you can look expressive and natural. Smoothing crow's feet can make your eyes look much more youthful. It can on occasions emphasise any bags under the eyes but we will warn you of any possibility of this at our consultation. Forehead lines can be softened and eyebrows can be resculpted to improve the arch shape and symmetry. Treatments can be tailored for patients who want a more natural look. As these treatments are prescribed to people, we are unable to quote any costs until we have made a full assessment and understand what effect you would like. Be cautious of companies quoting "one price fits all" as they are either over prescribing or under prescribing, neither is ideal for your face. We offer a free no obligation quotation based on your exact wants.

How does it work?

The toxin, which is a purified protein, works by blocking chemical messengers from the nerve to the muscle. Mild, moderate or severe reduction in muscle movement under the skin stops the skin folding and wrinkling.

Does it hurt?

A very fine needle is used and topical anaesthetic is offered to those who wish.

Before treatment

Treatment will not be offered to anyone breast feeding, pregnant, any person taking anti-coagulant therapy or sufferers of certain neuromuscular conditions. Your suitability will be assessed at your appointment.

After treatment

Avoid extreme heat and cold, avoid exercise, lying down or leaning over for the first 6 hours.

Expression of the face should be kept to a minimum the following day and facial treatments should be avoided for 2 weeks.

Generally after 2-3 days the effect will begin and the final result can take up to 3 weeks.

How long will it last?

3-6 months

Summary of treatment

- ◆ Procedure time
Less than 20 minutes
- ◆ Duration
3-6 months
- ◆ Anaesthetic required?
None necessary

Dermal Fillers

The term "Dermal fillers" encompasses a wide range of products and describes treatment that restores volume and structure to the face. Dermal fillers smooth fine lines and wrinkles by replacing your natural hyaluronic acid, elastin and collagen which naturally depletes with age with artificial hyaluronic acid. This compound can hold up to 1000 times its weight in water. It will hydrate and thus provide volume, moisturising and plumping effect to the injected area. We use Juvederm's advanced products which contain Lidocaine, a local anaesthetic, to help numb the area whilst simultaneously administering the treatment.

Juvederm is a temporary filler material that will not permanently remain under the skin. It will hold its effects for 6-9 months. The process can be reversed by an enzyme that naturally occurs in your body. There is a possibility of blood vessel blockage at certain sites of the face and it is for this reason that it is so important to understand its anatomy, if there is a risk, you will be informed at the assessment. The amount needed will vary from person to person so for that reason we will only quote after your free assessment. Dermal fillers can be used for: lips, cheeks, tear troughs, jawlines, chin and nose augmentation.

Summary of Treatment

- ◆ Procedure time
45 mins
- ◆ Duration
6-9 month effect
- ◆ Down time
1-2 days swelling
- ◆ Anaesthetic required?
Opical anaesthetic if needed
